

CEA-EPFL Meeting on Non-parametric PSF

PSF requirements

- Requirement on PSF area

$$\sigma(e_{1,2}) = 10^{-3}$$

- Requirement on PSF ellipticity

$$\frac{\sigma(R^2)}{R^2} = 2 \times 10^{-4}$$

- Assume that these requirements are for a known SED

Elements of "pipeline"

July 2016

$$Y = H X + N$$

$$\Rightarrow \min_x \|Y - H X\|^2 + C(x)$$

$$\Gamma_y = \Gamma_H \Gamma_x$$

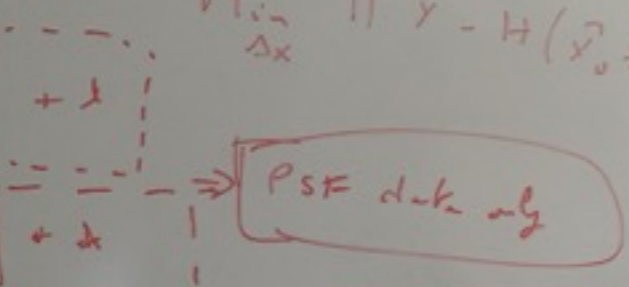

Deconvolution
Galaxies

Deconv +
Masking

Super Rad
PSF

Interp
PSF (RPSF, TO)

$$\min_x \|Y - H X\|^2$$

$$\min_{\Delta x} \|Y - H(x_0 + \Delta x)\|^2$$

Pre-Propagated
PSF

SED determination

Binary determination

Elements of "pipeline"

Wavefront approach
(Lance)

Model exit pupil
Use pre-defined Zemax modes
FFT
Fit to all stars

Backpropagation
(Ferréol)

Model all mirror surfaces
using backpropagation
techniques (phase
retrieval from intensities)

Model deviations from
wavefront estimates (?)

Super resolved PSF
(Fred)

Optimal transport
(Fred)

Inperpolation (BRF, Splines)
(Marc)

Determination of SEDs
(Thibault)

Identify binaries
(Thibault)

Elements of "pipeline"

Adopted by SGS
so far

Wavefront approach
(Lance)

Model exit pupil
Use pre-defined Zemax modes
FFT
Fit to all stars

Backpropagation
(Ferréol)

Model all mirror surfaces
using backpropagation
techniques (phase
retrieval from intensities)

Model deviations from
wavefront estimates (?)

Super resolved PSF
(Fred)

Optimal transport
(Fred)

Inperpolation (BRF, Splines)
(Marc)

Determination of SEDs
(Thibault)

Identify binaries
(Thibault)

Elements of "pipeline"

Adopted by SGS
so far

Wavefront approach
(Lance)

Model exit pupil
Use pre-defined Zemax modes
FFT
Fit to all stars

Backpropagation
(Ferréol)

Model all mirror surfaces
using backpropagation
techniques (phase
retrieval from intensities)

Model deviations from
wavefront estimates (?)

Goal

Super resolved PSF
(Fred)

Optimal transport
(Fred)

Inperpolation (BRF, Splines)
(Marc)

Determination of SEDs
(Thibault)

Identify binaries
(Thibault)

From pixelized
PSF only

Plan A for the day

10:00 Courbin: General introduction

10:30 Amiaux: The characteristics of the VIS PSF

11:00 Hudelot/Okumura: The CEA-IAP PSF factory (PSFs from OU-SIM or VIS ?)

11:30 Ferreol Soulez: Parametric modeling: backpropagation approach

12:00 Fred Ngole: Non-parametric sparse representation of the PSF

12:30 - 13:30 lunch and coffee

13:30 Kuntzer: Machine learning and PSF characterization and interpolation

14:00 Farrens: Space variant deconvolution of galaxy survey images

14:30 Schmitz: Optimal Transport and its uses in PSF-related problems

14:30 - 16:30 Discussions and actions: combining with Lance's WP

Plan B for the day

- Plan for the coming months
- How to combine with wavefront methods?
- What simulations do we have?
- What new simulations do we need?
- So far color is not implemented at all in any published method
- Effet of binaries and blends with galaxies
